Market structure of roundwood

Roundwood prices

Contemporary method (from 1995-)

- Statistics from Swedish Forestry Data Central (SDC).
- Primary tasks to make it easier to report raw-material transactions between the forest owners and buyers.
- Almost 75 % of all felling volume are passing SDC
- Population is roundwood quantities of which SDC calculate a value by using pricelists for each contract.
- All quality classes is included, except for refused logs and imported roundwood
- Only first buyer is included
- Prices includes a basic price inclusive deductions and additions, such as time of delivery, road standard etc.
- Value Added Tax is not included
- Price statistics is divided on three geographical regions; South, Middle and North.
- LKF-code is used to track timber

Roundwood prices

- Divided on assortments: sawlogs and pulpwood. Sawlogs on pine and spruce. Pulpwood on pine, spruce and birch.
- Prices statistics on both assortments and geographical region is weighted on volumes.
- No division on ownership
- No price statistics for special roundwood assortments or fuelwood.
- In Swedish kronor and per solid volume exclusive bark.
- Only delivery logs is included (15-20 % of total measured volume).
- Other types of sales are collected by SDC but not published due to difficulties in assessing the quality.

Delivery sale in Sweden:

1. Own forest
2. Delivery logs
3. Standing forest timber
4. Felling by purchaser
5. Delivery stumpage
